Energy medicine

**Presentation in Heidelberg, May, 7, 2004 in the „Stadthalle“,
Kammermusiksaal at 12.20 p.m. until 1 p.m.**

Live is too short to be small
~Benjamin Disreali
from „Thought of Ira Brind“

A True New Dimension in Health and Medicine Part III. Medical Breakthrough of Biophysics.

Review from Part I from my publications in the magazine „Explore“ volume 12
number 5 and 6, 2003:

**ONDAMED means „medicinal wave“. It is rebuilding the electromagnetic
life field of diseased tissue by induction and by application of specific
waves to non functional parts of the body.**

**Both the blocked tissue and the necessary induction-wave are found by a
simple pulse test in cooperation with the ONDAMED device. The wave
range is between 0.1 and 32.000 Hertz at 5-60 milli-Tesla. By producing a
specific single wave for each individual patient, the system works very
powerfully and effectively. Special brain programs eliminate pathological
brain impulses stored in the CNS.**

**172 well-designed programs are effective for a wide spectrum of health
disorders. Other frequencies of the system work to balance
microorganisms.**

**This biofeedback system, based on the patients V.A.S (vascular autonomic
signal) is essential for both symptomatic and systemic application.
However, to enjoy it's full power, you need to follow strict rules to
counteract chronic illness.**

**ONDAMED is a must and a basic tool for any therapist in the 21st century.
It is all about influencing, rebuilding, and „retuning“ the Life Field“,
according to Professor S. Burr from Yale University.**

**„We do not know, how to handle our old mother any more“, said her son sitting
opposite to me in my consultation room.**

**„Only her stays of her corset hold her together and she has this constant
unbearable pain in her bones and spine. The osteoporosis started in her fifties
and left her now totally disabled with 86 . Of course she cannot walk by herself.
Even crutches won't do it because her bones are virtually crumbling and cracking**

apart. Is there anything you could do for her?“ he added with a clear doubt on his face.

Looking at him, I remembered another patient with a fractured spinal lamina, after he slipped and fell down a marble stairway. He was like a turtle on his back, unable to move around and overwhelmed by pain. The ONDAMED „bone healing“ program gave relief within 3 days!

I also recalled a male asthmatic patient, who had multiple fractured spinal bones after using cortisone for decades. He could walk on crutches again after 10 days of treatment with ONDAMED`s special program for osteoporosis.

You may remember my previous publication in EXPLORE, the relief, ONDAMED gave me for my destabilized tooth, which bothered me after a dental malpractice surgery by having been pulled a healthy tooth. So the 86 year old lady was scheduled for the same treatment, which turned out to be miraculous. The code for the program is added below for your information.

If it was only for osteoporosis the ONDAMED is a true new dimension and a giant in biophysical medicine for the 21st century. However, after a short historical journey I will explain other healing issues which have become a mile stone so far.

How did biophysics, all of a sudden, become so prevalent in medicine ? The answer is:

Life is physics.

The discovery of X-ray started the era of physics for the medical world about 100 years ago.

Another electromagnetic method, which had been considered impossible by experts, is part of our daily routine since 1970 – the Magnetic-Resonance-Imaging (MRI).

First time in 1979, Jerry I. Jacobson used extreme weak electromagnetic fields (10 pico Tesla) for treating a variety of diseases including cancer. Jacobson`s Resonance is based upon Einstein`s Algebraic Unified Field Theory combining electricity, magnetism, and gravity.

New biophysical therapeutical systems are beeing developed for 30 years in Germany such as BIORESONANCE, QUINT System, and the ONDAMED System.

They are used effectively and successfully and each method enriches the existing body of medical therapies enormously. However, Bioresonance is limited. The key word of healing seems to be **Bioelectromagnetism**. The use of physics in the medical world and especially the use of

Bioelectromagnetism as a tool in therapy evolved in the middle of the previous century. Today it appears to become the medicine of the 21st century. There is a continuous growing body of knowledge in theory, experimentally, and clinically and we have accumulated about 10.000 reviewed publications worldwide, also in Russia and India.

Above all, the world of physics has given birth to new functional understanding for the over 250 years of Homeopathy, the science of the fine-toxicity of substances to humans and animals. This method is believed to operate in the fifth and sixth dimension. According to Burkhard Heim, a German physicist, the world formula seems to have six dimensions. This has been fully mathematically proven at the DESY.

Kinesiology – a therapeutic giant – is based on so called „energy fields“. Callahan, for instance, proved and patented the superiority of his TFT (Thought Field Therapy) over conventional psychological methods, which are often used fruitlessly over years in cases of phobia in former Vietnam soldiers

Max Planck: If there are new discoveries, it is not that everybody will be convinced . However, they who do not comprehend them, will die out.

ONDAMED, a most innovative biophysical tool, is more than setting some buttons for healing bone fractures or osteoporosis. Above that, it is capable to influence systemic diseases including psychological disorders very well. However, as I mentioned before, then you have to follow strict rules.

This has something to do with the *Vectors* of the underlying causes of the disease. The mathematical interconnectedness of several factors, which each are pulling at each other, are causing a very different and yet specific result. For instance:

Father has financial problems and is yelling at his wife to bring him a beer. She is cooking and diapering her daughter, who is lying on the kitchen table. Mother gets scared by father`s outburst and is hunting for a beer in the cooler next room. Meanwhile the baby is rolling off the table contracting a bleeding head injury. Although the main issue is now to treat the baby`s head wound, we still have to work on the emotions both of the father and the mother in order to bring the family back to balance and to avoid further damage elsewhere.

Therapists have long understood, that a certain treating-sequence has to be followed in order to heal on deeper levels and not only to improve a condition a little bit (S.Karz).

Different medical devices use different approaches for that:

The Quint system, for instance, uses a complicated, but effective, computerized testing method through electro-acupuncture. It finds almost any cause and factors which clear the diagnosis including radioactive substances and specific emotional trauma such as child abuse, suicidal tendency etc. The energetic therapy is then digitally applied by Schuhmann waves serving as a carrier. The energetic waves will carry all informations, all specific signals such as

radionuclide elimination, bacterial elimination, rebalancing the psyche and so forth.

The QUINT System has a very interesting treatment concept for bacteria by using the bacterial vector.

In a case of E. coli infection, for instance, the QUINT testing could reveal energy fields of **Staphylococcus, Streptococcus, Mycobacteria, and Clostridia**. As E.Coli does not show up in the testing, it is believed that the other bacteria are providing the 'energetic soil' which is actually responsible for the pathogenicity of E.Coli. Consequently this vector (**Staph, Strep, Myco, and Clostridia**) is used to treat E.Coli infection although E.Coli is not a part of this vector. This phenomenon reminds me of Chinese healing plants who, as a single plant, may not have any effect, but mixed in a certain mixture becomes a powerful remedy. The same with the bacterial vector. A few mycobacteria may not have any impact on health. However, in combination with Staphs, Streps, and Clostridia they are causing a pathogenic energy field and grow E.Coli to become pathogenic.

Of course this systemic approach is time consuming, expensive, but effective. This may also explain, why the ONDAMED indicates often certain microorganisms, which have not been tested by Electroacupuncture. If we treat those, the patient improves. Since we are dealing with our electromagnetic field in order to restore health, plain electromagnetic devices – without additional signals of medications - should do the job. It is postulated (Karz, Kessler et al.) that the ONDAMED could be of sufficient help here, and nothing else is needed.

The ONDAMED is vectorizing the problems

1. by finding the interconnected, blocked tissues and blocked sites, based on Nogier's idea, a French physician, who first postulated that there are certain areas or spots of the body to be held responsible for non healing. He found them by pulse reflex.

2. by the optional use of Kinesiologie as practiced by some therapists (Karz). Thus, in combination with the ONDAMED, we can address each underlying cause with the adequate sequence of therapeutic steps. Such a therapy concept would look like:

What belongs to the Primary Treatment?

You ask the patient using the muscular test:

It is necessary to do the:

First Treatment

- Geopathy /Transmitter Treatment
- Scar Treatment
- Treatment of the Constitution of the Patient
- Balancing of the Quadrants of the Body
- Treatment of the Acutely Inflamed and Focalized Area

- Pain Treatment
- Anti-Stress Program

Secondary Treatment

- Correction of the Hyoid (Tongue-Bone) and the Jaw Joint
- Thymus-Treatment
- CNS Build up
- Treatment of the Pituitary
- „Switsh“ Program (energy is flowing downwards in the conception vessel and upwards in the governer vessel, which is not physiological)

Tertiary Treatment

- Tissue Points
- Nutritional Points
- Metabolic Program

Follow up Therapies

- Indication Program*
- Treatment of Focalized Inflammatory Sites

These programs could be differentiated into

- Organ-Program:
- Psychovegetative Program etc.
- Family Conflict program

At the end of the therapy you have to find out, whether indeed everything has been

done sufficiently for the patient at that sitting, asking:

„The total therapy is finished for today?“

If yes: „An additional remedy is supportive?“

(Bach Flowers, Programming Ampuls for Home treatment etc.)

If No: Restart with the testing at the beginning.

This method works.

30 years of my work as a physician have taught me, that Biophysics such as Homeopathy, Bioresonance, Quint System, Kinesiology and the Ondamed System are essential for initiating healing.

Kinesiology can be a valuable support for each of these methods.

My presentation is focusing on the daily clinical work. In other words, the realm of the theory of biophysical functioning will be left to experts as Popp, Ludwig, Köhler etc..

Biophysical Medicine makes a stand for two main issues:

You get an detailed diagnosis with the QUINT versus the ONDAMED. The

ONDAMED finds the site of the blockage. By using both of them you have a more complete system.

You also have definite diagnosis on the vector level. A more complete energetic diagnosis. The ONDAMED steps in where :

1. The patient did not respond adequately to treatment before and shall be made to responding to therapies. Consequently he will produce satisfactory healing results.
2. The quality of regulation is to be improved. Organs which do not regulate e.g. "work" adequately, are draining energy of the entire person. In that case healing will be slim or *impossible*.

Both issues are a domaine of Biophysical Medicine. Besides that, today Biophysics a priceless tool in functional diagnostics and is providing a unique instrument in the hand of the therapist (EDS, Electrodermal Screening).

„Do not tell me anything about your ailments until I have tested you through. I want you to build up trust and wonder, how I do know, what problem you have, before you tell me. Then you will understand better, that medicine has entered a new era.

This I usually say to a new patient before we start working on him.

„Besides that, if I cannot find out what you have, I cannot treat it. God has placed diagnosis before treatment.

Modern understanding of disease epitomizes to the formula: our body is the best healer, if we re-organize it`s energy field. (according to S.Burr, Yale University) We may not even have to know, that certain bacteria such as salmonella are involved, if we understand **the energetic connectedness** of the problem and reorganize the electromagnetic field of our body.

In other words: there is a family of six people enjoying a meal together. Only two persons contract an intestinal infection with salmonella. This, I have seen many times in my 34 years of practice, and it suggests that the functional stability of the other four healthy people must have been better. And exactly at this point e.g. improving „functional stability“, modern biophysics (ONDAMED, QUINT) are so successful.

Today – as you see - I picture two medical systems, which, I think, seem to have the most importance in Functional Medicine:

1. The QUINT System. A vectorizing method – based on electromagnetism (Schuhmann waves) in combination with digitally tested healing substances. The substances are applied as analogous signals

together with Schuhmann waves.

2. A method, which works solely with electromagnetic frequencies based on color and tone (ONDAMED). It is simple to use and yet the creation of a genius. It can both detect and treat chronic and acutely inflamed areas or tissues of the patient. It can also reorganize diseased tissue (Osteoporosis etc.) and could counteract microorganisms.

The more complicated system „Quint“ is using electrodes for transmitting (injecting) therapeutic signals as vector-prescriptions, to re-balance the chinese system of Five Elements.

By this method always the entire energetic system of the patient will be brought holopathically into balance, claims Dr. Steiner, the Austrian inventor.

Man will be measurable energetically. Simultaneously – among other means - QUINT uses the electrophysical gradients of the table of elements. Thus it uses the synergism and antagonism of these elements.

Certain elements which act antagonistic to certain radionuclids (radnucs) could help eliminating these radnucs from the diseased body.

Remember, we talk about biophysics here. It is again the bioelectromagnetic wave field, which applied to the body and to the right area. This makes other therapists (Karz, Kessler et al.) think: „this could be done much easier with the ONDAMED.“

According to my medical experience, several different biophysical methods in combination could complement each other in an astounding way. The patient will have better healing results. Think of a plane landing in San Francisco airport in the deep fog. The plane will land safely because it is vektorized down by two different systems of instruments: the devices on board of the plane and the ones on the ground!
